

**AMENDMENT TO THE SPECIFICATION:**

Please amend the specification as follows:

Please amend the paragraph beginning “On the other hand, ...” on p. 26 as follows:

On the other hand, the static user profile memory 17 stores static information not changed by a location change and a time passage of the mobile terminal 10B in a user profile as the information related to the user of the mobile terminal 10B. As shown in Fig. 8B, (1) the user ID of the mobile terminal 10B, (2) a user liking information representing the user's taste (~~For~~ for example, the user likes French food, the user's hobby is cinema appreciation, and the user likes a tourist ~~resort~~ resort), and (3) a location independent information are stored. When the user outputs the service request from the mobile terminal 10B, a distinction whether the user requests the location dependent service from the location dependent service providing server 22 or the location independent service from the location independent service providing server 23 is determined by the location dependent/independent indication information registered in the dynamic user profile memory 16.
